Topic Name: Online Job Portal

Objective

The online job portal system is a platform between job seekers and job providers (company). The Job seeker can easily find and apply for a job by login into the system. The Employer or company can easily get an expert employee from our job portal site by posting a job.

Create a web application for a company that will be used by job seekers to apply to the job requirements.

We will create a front end where users will view jobs.

There will be a login page which also has register functionality.

The user will be taken to the home page after login, where they can view different jobs.

Modules

1. Job seeker/Employee
 - able to view register/login
 - search jobs
 -
2. Employer-
 - Users- view all registered users
 - Jobs - add jobs based on category
 - Delete jobs
 - Edit jobs
 - View jobs.

Cloud Tech Stack

AWS Elastic Beanstalk

AWS Aurora

AWS S3

AWS Cloud Watch

Expected Deliverables

1. Presentation of Project in Microsoft PowerPoint
2. Screenshots of the Project done in a word document
